#### Texas Tech University Whitacre College of Engineering

# CS 2413/5401 – Data Structures Spring 2022 Lab Assignment 5

Acknowledge your collaborators or source of solutions, if any. Online submission is required.

While designing your programs or answering items, you are free to come up with your own assumptions based upon concepts and material learned in the course, if every potential specification is not given to you. Just be reasonable and document your assumptions. Such assumptions should not conflict with concepts and material learned in the course.

Your compliance with the "PROGRAMMING STYLE GUIDELINE" for CS 2413/5401 will affect your actual grade. All assignments will be checked for academic misconduct (cheating, plagiarism, collusion, falsifying academic records, misrepresenting facts, violations of published professional ethics/standards, and any act or attempted act designed to give unfair academic advantage to oneself or another student) defined by "OP 34.12: Grading Procedures, Including Academic Integrity" of TTU. Special software will be used to uncover such attempts.

A subset of answers submitted in this lab may be graded.

**Objective**: Practice using binary search trees

#### Tasks:

- 1. You may work on this assignment by yourself, or you may work with one other student in this course as a team to complete this lab assignment.
  - a. Teams larger than 2 people will incur a 25% penalty off the total lab points per extra person.
  - **b.** It is expected that each team member contributes equitably and participates in coding and design ideas.
  - **c.** If a team member is dissatisfied with the performance of the other team member, you are allowed to dissolve the team and continue individually.
    - i. Whatever code each team member has contributed may be taken with that team member.
    - **ii.** Try not to let such a decision wait for the day the assignment is due as no extensions will be given if a team is dissolved.
- 2. Write a C program, problem1.c, to read in a text file, called text.txt, and build a concordance file, called concordance.txt, for the file showing the number of unique words, the unique words, and the number of times each unique word occurs in the text file. A word only has alphabetic characters. Test your program with text.txt files of differing contents.
  - **a.** Example
    - i. Text File text.txt (test empty, one word, and larger text files)
      - 1. A concordance of a text file is an alphabetical list of the unique words in the text file.
    - ii. Concordance File concordance.txt
      - **1.** There are 13 distinct words in the text file:
      - **2.** a 2
      - **3.** alphabetical 1
      - **4.** an 1
      - 5. concordance 1
      - **6.** file 2
      - **7.** in 1
      - **8.** is 1
      - 9. list 1
      - **10.** of 2

### Texas Tech University Whitacre College of Engineering

- **11.** text 2
- **12.** the 2
- **13.** unique 1
- **14.** words 1
- **b.** Use a binary search tree to store the words and keep a count of the number of times each word occurs in the text file.
  - i. The binary search tree operations, such as insert, search, count\_nodes, get\_height, and others, should be written as separate functions.
  - ii. The root of the tree should be a pointer that points to the root node of the tree.
- **c.** The main function should be a driver to call other functions to perform the required tasks to check each equation.
- **d.** The program should output to the screen the following "tree check" which should also be added to the end of program1.c in the comments for each test case. Check for one word in the tree and for one word not in the tree.
  - i. Tree Check:
  - ii. Tree Height: 7
  - iii. Tree Size : 13 nodes
  - iv. concordance is found and has frequency 1

٧.

- vi. Tree Check:
- vii. Tree Height: 7
- viii. Tree Size : 13 nodes
  - ix. water is not found
- e. No global variables should be used but define macro constants and typedef's may be used.
- **f.** The C library files string.h and ctype.h may be used, but please use the safe string operations, such as *strncmp* in string.h.
- **g.** Report: In the comments at the end of the program, give the following information:
  - i. Team Member Names
    - 1. For each team member, detail the work on the program concerning specific work, test cases, and code and functions designed, implemented, and modified, such as
      - **a.** Name
        - i. void insert (node\_t \*\*tree, char w[]); designed/implemented/modified
        - ii. created text.txt for test case 1, 2, 3, ...
        - iii. ...
    - 2. A grade penalty of up to 25% of the total assignment points, which will be in addition to any other penalties, may be considered if inequitable contributions are made, not enough detail is present to be convincing, and/or all team members have the same list; i.e., all team members allegedly did the same thing (if both team members do the same thing one team member is not needed).
  - ii. Test Cases and Status
    - example text.txt passed/failed
    - 2. text.txt with one word passed/failed
    - 3. empty text.txt passed/failed
    - 4. text.txt with > 500 total words passed/failed
    - **5.** ...
  - iii. Binary Search Tree Analysis
    - 1. Example of a best case for inserting n words into a binary search tree
    - 2. Big O of the best case for inserting n words into a binary search tree
    - 3. Big O of the storage requirements for a binary search tree of size n

# Texas Tech University Whitacre College of Engineering

**4.** For the example text.txt file, the tree height is 7. What would the minimum height be in the best case?

# **Learning Outcomes:**

- Understand C program concepts, such as structs and pointers
- Understand how to implement dynamically allocated binary search trees

## **Grading: 50 points**

- Standard Deductions 14 points
- Problem 1 36 points (problem1.c, , text.txt, concordance.txt) with the rest of the test cases as text1.txt, concordance1.txt, ...)
  - Binary Search Tree 12 points
  - o Report 12 points
  - Test Cases 12 points

#### **Due Date:**

2/25/2022, 11:59pm (submitted on Blackboard by ONE team member)
